Chemotherapy

ᐅᑕᖏᑕᐅᓂᖏ

How is chemotherapy given?

Chemo is most often given by a needle into a vein (IV or intravenous). When the chemo treatment is finished the needle is removed. Sometimes a thin tube is inserted into a vein and is left in for all your treatments. This is called a PICC or PORT. Chemo is also given by:

- mouth (pill or liquid)
- needle into a muscle (injection)
- rubbing onto the skin (cream)

How often will I get chemotherapy?

Chemo treatments are often called cycles. The number of treatments or cycles given depends on each person's cancer. Treatments may be given:

- daily, weekly or monthly
- continuously by a pump that you wear home

How long does chemo take to give?

Chemo treatments can take a few minutes, several hours or a few days.

Where will I get chemotherapy?

Chemo is usually given in the cancer clinic and you go home the same day. Some treatments are only given in a hospital and you need to stay overnight or longer.
