28 of the 329 women screened at mobile sites in the region in 2012 were 70 years of age or over

## RHA Screening Participation Rates

- Screening rates for women 50-69 years of age

***The Program's goal is to screen 70% of the population of women 50-69 years of age every 2 years.***

**It takes the effort of the entire community to make mobile screening a success. Here are some of the regional highlights for 2012:**

- Compared to 2010:
  - Burntwood breast screening rates increased by **3%** (44% to 47%); Churchill breast screening rates increased by **6%** (47% to 53%).
  - The population of women 50 to 69 years of age increased by **202 women** (2929 in 2010 to 3131 in 2012).
    - BreastCheck screened **177** more women 50 to 69 years of age (1299 in 2010 to 1476 in 2012)
    - The following communities increased their screening rates by 5% or more:
      - Churchill
      - Ilford
      - Leaf Rapids
      - Red Sucker Lake
      - South Indian Lake
      - Split Lake
      - Thompson
    - Split Lake increased their rates by 21% despite a population increase of 14 women 50 to 69 years of age. The increase in rates is a direct result of the hard work and dedication of local health care workers to arrange regular group trips to Thompson for breast screening.
- BreastCheck encourages community organized group trips to help local women get to the closest screening site. In 2012 the following communities participated:
  - Wasaagomach flew 11 women via helicopter to St. Theresa Point.
  - Garden Hill drove 13 women on the winter roads to St. Theresa Point.
- BreastCheck organizes and funds flights for women from select communities to get to the nearest screening location. In 2012, BreastCheck flew:
  - 27 women from Gods Lake Narrows to Oxford House
  - 14 women from Red Sucker Lake to St. Theresa Point
  - 6 women from Lac Brochet to Lynn Lake
  - 10 women from Brochet to Lynn Lake
  - 5 women from Tadoule Lake to Lynn Lake

For more information regarding individual communities please contact:
